Vita Flex CR System
Image Suite/V4 Software

DIGITAL. POWERFUL. CUSTOMIZED.

Better Care Unleashed.

AN IMAGING SOLUTION WITH AN IMPRESSIVE PEDIGREE.

Switching from film to digital can seem like a big step for a small practice. You might be concerned about the transition being disruptive to your office, or about the time required to master a new technology. You may also be unsure that a digital system will provide all of the vet-specific features you need.

Here's the answer: the CARESTREAM DIRECTVIEW Vita Flex CR System, combined with CARESTREAM Image Suite software. This system is custom-designed for veterinary applications. It's fast and easy to use. It provides superb image quality and boosts productivity. All at an affordable price. So now, you can go digital with confidence.

A NEW BREED OF VETERINARY IMAGING.

IMAGE SUITE: OPTIMIZED FOR VETERINARY APPLICATIONS

Many digital-imaging systems marketed to vets come with a generic, human-based clinical interface that requires you to adapt. By contrast, Image Suite software adapts to the way you work -- with a custom-designed veterinary interface.

Our order-entry screens have the fields you need, for selection of breed, species and more. You can also input unique identifiers like tattoos and chip IDs. Veterinary-specific reference images are provided to support accurate positioning, while sample veterinary X-rays provide guides for enhanced image quality. Our customized animal-image processing database fine-tunes processing parameters for specific species, breeds, body parts and views. Specialized veterinary measurement tools include:

- Hip Dysplasia Measurement Tool
- VD Thorax Measurement Tool
- Vertebral Scale Measurement Tool
- Tibial Tuberoses Advancement Measurement Tool
- Tibial Plateau Leveling Osteotomy Measurement Tool
- Laminitis Measurement Tool

Faster Results

The system is *fast* – it delivers high-quality images in mere minutes so diagnoses can be made far more quickly.

Displaying digital images on screen for pet owners also makes it faster and easier for you to explain the animal's condition – and recommend the right treatment. Of course, rapid image access also means expedited workflow and enhanced productivity in your practice.

A Quick and Easy Transition

Smooth, simple installation means you'll be up and running quickly – usually in less than two hours. The system is exceptionally simple to learn and use – training time is minimal, as the cassette handles just like the film you're using now. The system's interface design is highly intuitive, so you and your staff will be using it like experts in no time. In short, your transition to digital will be quick and painless.

THE CARESTREAM VITA FLEX SCANNER: QUALITY IMAGE SCANNING MADE SIMPLE

Enhanced Efficiencies

The Vita Flex scanner is a lightweight tabletop unit with a small footprint. It's an ideal fit for small facilities, and can also be taken into the field if needed. Images can be stored on hard drives, CDs or other removable media. Finally, when you wish to collaborate with other vets, there's no need to mail or courier film – share your images instantly and electronically.

Imaging You Can Depend On

In addition to speed, you'll receive excellent image quality. The Vita Flex system provides sharp, clear images that support more accurate review and diagnosis. Our image processing has been finely-tuned for the body parts/views of the animals in your care. So don't settle for processing designed for a human ankle, when what you really need is processing optimized for a canine hock.

BOOST YOUR
PRODUCTIVITY
WITH THE
DIGITAL SOLUTION
VETS HAVE BEEN
WAITING FOR.

OPTIONS TO MAXIMIZE YOUR IMAGING CAPABILITIES.

CARESTREAM DRYVIEW 5700 Laser Imager

Ideal for veterinary practices, the DRYVIEW 5700 Laser Imager offers speed, simplicity and true affordability when a hardcopy print is needed.
